A close-up photograph of a blue and yellow electrical plug, showing the metal contacts and the insulation. The plug is angled, with the yellow part at the top and the blue part at the bottom.

Sector research to promote
the UK small cap ecosystem

Critical minerals for UK:
Mining and battery recycling

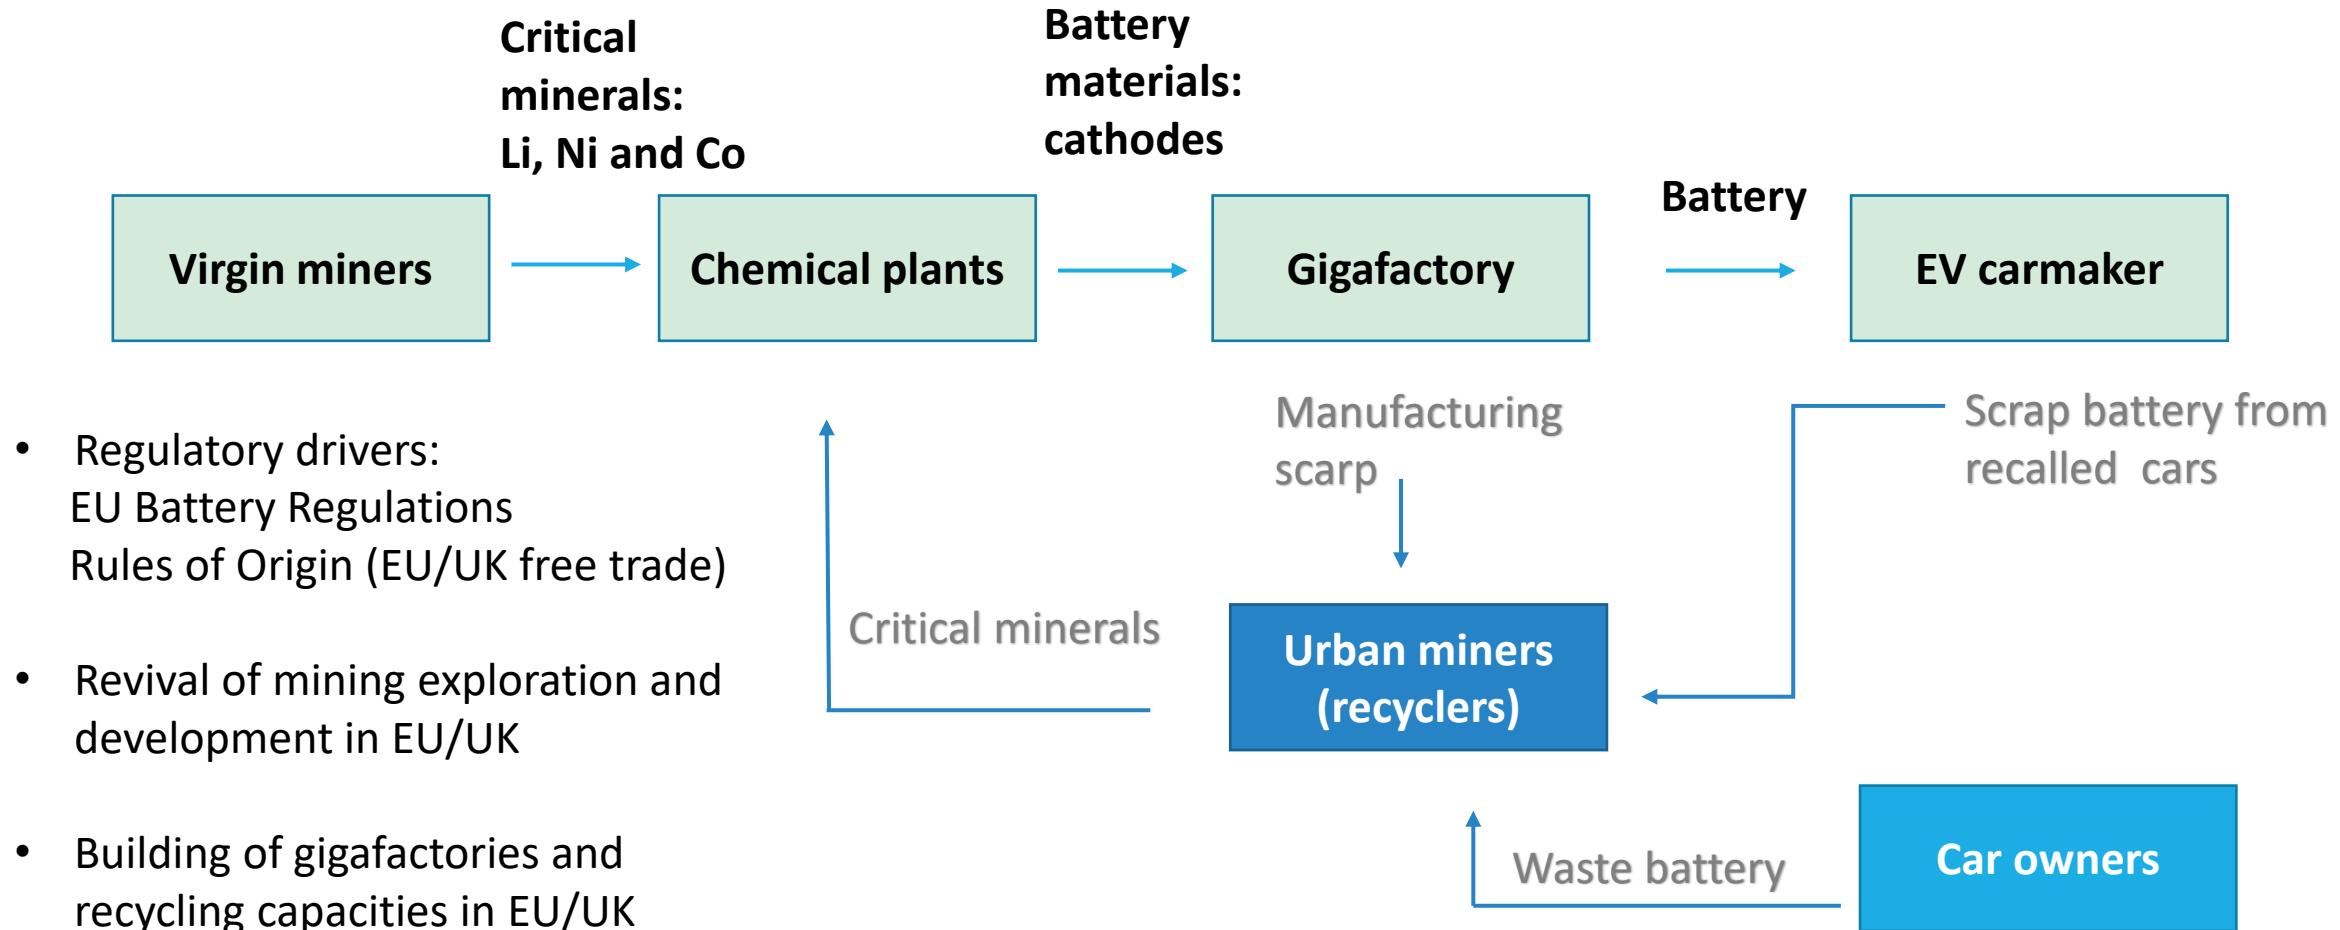

Virgin mining and urban mining of lithium
(published in May 2023)

Traditional EV economy: one-way

- Battery packs account for approximately 40% of an EV weight and value. Concentration of value chain activities results in high transportation costs and carbon footprint.
- Earliest electric vehicles introduced in the market are retiring. Critical minerals (e.g., lithium, nickel and cobalt) inside batteries should be recycled and reused.

Circular EV economy: closed loop
